

## **Signs: For Your Safety**

One of FORA's primary concerns is the safety of local citizens during remediation of munitions on ESCA properties. At the outset of the FORA ESCA Remediation Program a variety of signs were posted at kiosks, trailheads, pathways, and active remediation sites. These signs were designed to guide recreationalists onto approved Access Corridors, designate closed trails, and identify ongoing munitions remediation areas.

FOR A, at the request of EPA, is evaluating the current signage on the ESCA properties. In the coming days additional signage will be placed at existing and new kiosks, trailheads, gates, along Access Corridors and trails so there is no question about which areas are closed, which ones remain open, and which are undergoing active remediation. For the safety of local citizens, adherence to these restrictions is not a choice, it is mandatory. Trespassing puts one at risk and is an enforceable violation.
